Selected work

TWO GAMES / ONE REDESIGN

01 / INTERACTIVE SOUND

Chong Chong Yu Dong

Interactive sound design for a hand-drawn tower-defence game.

View project online >

02 / INTERACTIVE SOUND

Wake Up Tokyo

Combat sounds, music editing and spatial audio for a browser game.

View project online >

03 / SOUND FOR PICTURE

Delta Force PV

Independent music and sound-effects redesign for a game cinematic.

SUPPLEMENTARY PROJECT

Sound Workshop

Read >

I designed the audio workflow for a game development tool, working with developers.

01 / INTERACTIVE SOUND / 2.5D TOWER DEFENCE

Chong Chong Yu Dong

A hand-drawn tower-defence game where players draw paths to summon creatures and defend a castle.

MY ROLE **Sound design, sample editing, Unity and Wwise implementation**

View full project on website

Opening menu of the playable build, with the Start Game button.

LISTEN FOR

00:25 / Drawing. I used a looping pencil sound while the player draws, with a short accent at each turn. It stops when drawing stops.

01:09 / Combat. I placed a paper-tearing sound after the attack's initial sweep, adding a dry texture to the end of the hit.

INTERACTIVE MUSIC

I linked preparation and combat to separate music cues. When a wave ends, the music returns to preparation. I adjusted the mix so drawing sounds and important warnings remain clear.

Game and visuals by the Chong Chong Yu Dong team. Earlier demo label: Hua Shou. Pencil and paper from Office Building via Splice; sweeps from Fantasy Game 2. Music editing and game-state transitions by Hu JinLin.

Project details and Wwise implementation online

02 / INTERACTIVE SOUND / THIRD-PERSON BROWSER ACTION

Wake Up Tokyo

Players awaken citizens through close-range combat and gather a crowd. I worked on combat sounds, music and the spatial positioning of footsteps.

MY ROLE **Audio editing, Wwise authoring and Steam Audio integration**

View full project on website

Upgrade feedback in street gameplay. The first link opens my continuous gameplay recording.

> Watch gameplay / 02:41

COMBAT AND PROGRESSION

I worked on light and heavy punches, card reveals and upgrade confirmations, giving actions and progression their own sounds.

I used fades to hand over between music from different phases of play.

FOOTSTEP DIRECTION

I compared standard panning with Steam Audio headphone rendering to explore how footsteps are heard in front of and behind the listener.

The website includes the listening comparison, Wwise demonstration and routing details.

Game and visuals by the Wake Up Tokyo team. Audio editing and interactive music implementation by Hu JinLin, with AI-assisted coding. Featured work: melee, progression, movement and music.

Project details and Wwise implementation online

03 / SOUND FOR PICTURE / INDEPENDENT REDESIGN

Delta Force PV

I redesigned the music and sound effects for an excerpt from a Delta Force season cinematic.

MY ROLE **Music and sound-effects editing, synchronisation and final mix**

View full project on website

Container yard blast at 01:09 in the sound redesign. Picture from the source cinematic.

> **Watch the sound redesign / 02:51**

> **Original cinematic on Bilibili**

LISTEN FOR

00:30 / Headset and monitors. I aligned the start of each equipment sound with the action on screen, then let its tail continue briefly after the movement.

01:09 / Container yard. I kept the music running across picture cuts and brought the explosion and dockside impacts forward in the mix.

I kept the original picture edit and shaped the transitions by adjusting the timing and balance of music and effects.

Sound redesign by Hu JinLin. Original dialogue retained. Picture and edit from the official Delta Force season cinematic published on 16 April 2026, credited to the original rights holders.

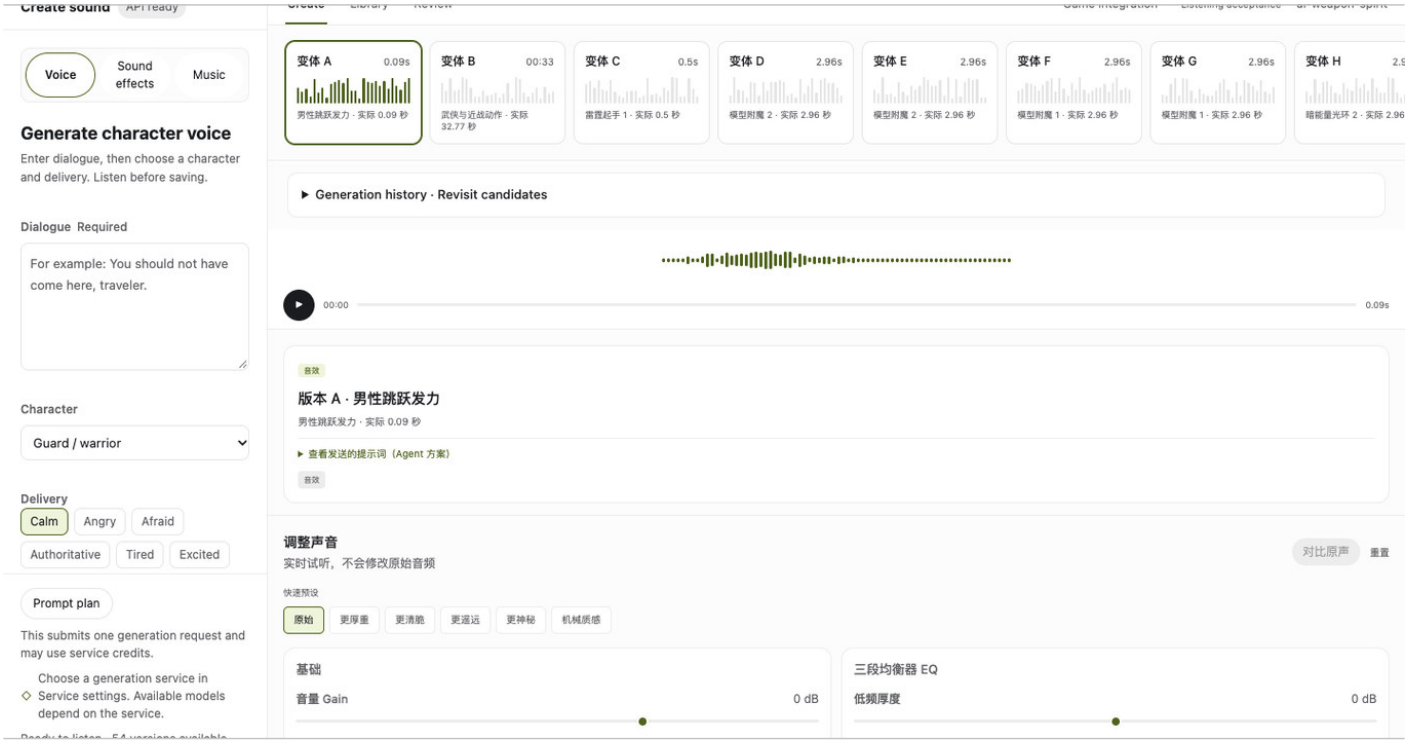

S1 / SUPPLEMENTARY / TEAM AUDIO PLUGIN

Sound Workshop

A Tiangong Engine tool for making and revising music, sound effects and voice, then testing them in a game.

MY ROLE **Audio workflow design, implementation with collaborators**

View full project on website

Sound Workshop interface for comparing sounds and revising a selected version.

> View full project on website **> Official plugin catalogue**

MY CONTRIBUTION

I designed the audio workflow and worked with developers on implementation. Creators can compare and revise sounds, retain their source and settings, and connect them to game events.

TESTING IN A GAME

For one test, we exported and imported a 16-second generated music cue, then checked that it started, looped and stopped in a game template.

01 BRIEF 02 AUDITION 03 REVISE 04 BIND TO EVENT

Audio workflow and product direction by Hu JinLin. Implementation with developer collaborators and AI-assisted coding. Product catalogue: Tiangong Engine.
