Audiovisual Media MSc

Selected work

TWO GAMES / ONE REDESIGN

01 / INTERACTIVE SOUND

Hua Shou

Pencil gestures and paper-textured combat.

Read case study >

02 / INTERACTIVE SOUND

Wake Up Tokyo

Combat feedback, music cues and a spatial footstep comparison.

Read case study >

03 / SOUND FOR PICTURE

Delta Force PV

An independent sound redesign for a fixed picture edit.

Read case study >

SUPPLEMENTARY PROJECT

ForgeaX Sound Workshop

Read >

A plugin workflow for making, reviewing and connecting audio to game events.

01 / INTERACTIVE SOUND / 2.5D TOWER DEFENCE

Hua Shou

Draw a patrol route in a notebook, summon a creature and defend a paper castle.

MY ROLE **Sound design, sample editing, Unity and Wwise implementation**

Drawing a patrol route in the playable build. Gameplay at 00:25.

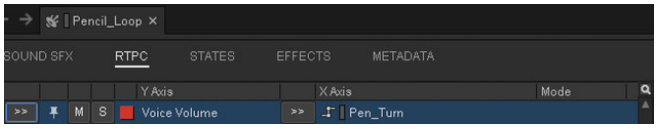

> Watch gameplay / 02:24 **> Wwise demo / 01:05**

LISTEN FOR

00:25 / Drawing. Friction follows the moving pencil. A short accent comes forward at a turn, and a pause stops the friction.

01:09 / Combat. A sweep marks the strike. I moved a 360 ms paper tear into the release so the dry texture follows the hit.

ONE LOOP, FOUR ACCENTS

Unity triggers a turn accent and updates **Pen_Turn**. Wwise uses the parameter to dip the friction loop by up to 12 dB.

Game and visuals by the Hua Shou team. Pencil and paper from Office Building via Splice; sweeps from Fantasy Game 2. Music includes Suno-generated material I selected, edited and integrated.

Full case study and Wwise evidence

02 / INTERACTIVE SOUND / THIRD-PERSON BROWSER ACTION

Wake Up Tokyo

Awaken citizens through close-range action and lead a growing crowd through Tokyo.

MY ROLE **Audio editing, Wwise authoring and Steam Audio integration**

Upgrade feedback in street gameplay. The first link opens my continuous gameplay recording.

> Watch gameplay / 03:41 | > Wwise demo / 02:36 | > Footstep A/B / 00:46

WWISE DEMO

00:39 / Action and progression. Hear light and heavy punches, a card reveal and an upgrade confirmation separately in Wwise.

02:09 / The street mix. Music_Street fades in over 0.70 s and fades out music from other phases over 0.65 s.

HEADPHONE A/B

Hear the same 21 footsteps pass in front of and behind a fixed listener. Both renders use matched levels and the same path, speed and distance curve.

One Wwise RTPC switches between native panning and Steam Audio's direct-sound HRTF.

Valve Spatializer reference

Game and visuals by the Wake Up Tokyo team. I used AI-assisted implementation and selected and edited Suno-generated music. My featured work covers melee, progression, movement and music.

Full case study and spatial routing

03 / SOUND FOR PICTURE / INDEPENDENT REDESIGN

Delta Force PV

I rebuilt the music and effects for an excerpt from a Delta Force season cinematic.

MY ROLE **Music and sound-effects editing, synchronisation and final mix**

Container yard blast at 01:09 in the sound redesign. Picture from the source cinematic.

> Watch the sound redesign / 02:52

> Original cinematic on Bilibili

LISTEN FOR

00:30 / Headset and monitors. Follow the timing of the close mechanical details against the visible actions. I lined up the attacks and let the tails carry past contact.

01:09 / Container yard. Music carries across the cuts while larger impacts move forward with the blast and dockside action.

The picture edit was fixed, so I shaped the transitions through cue timing and mix balance.

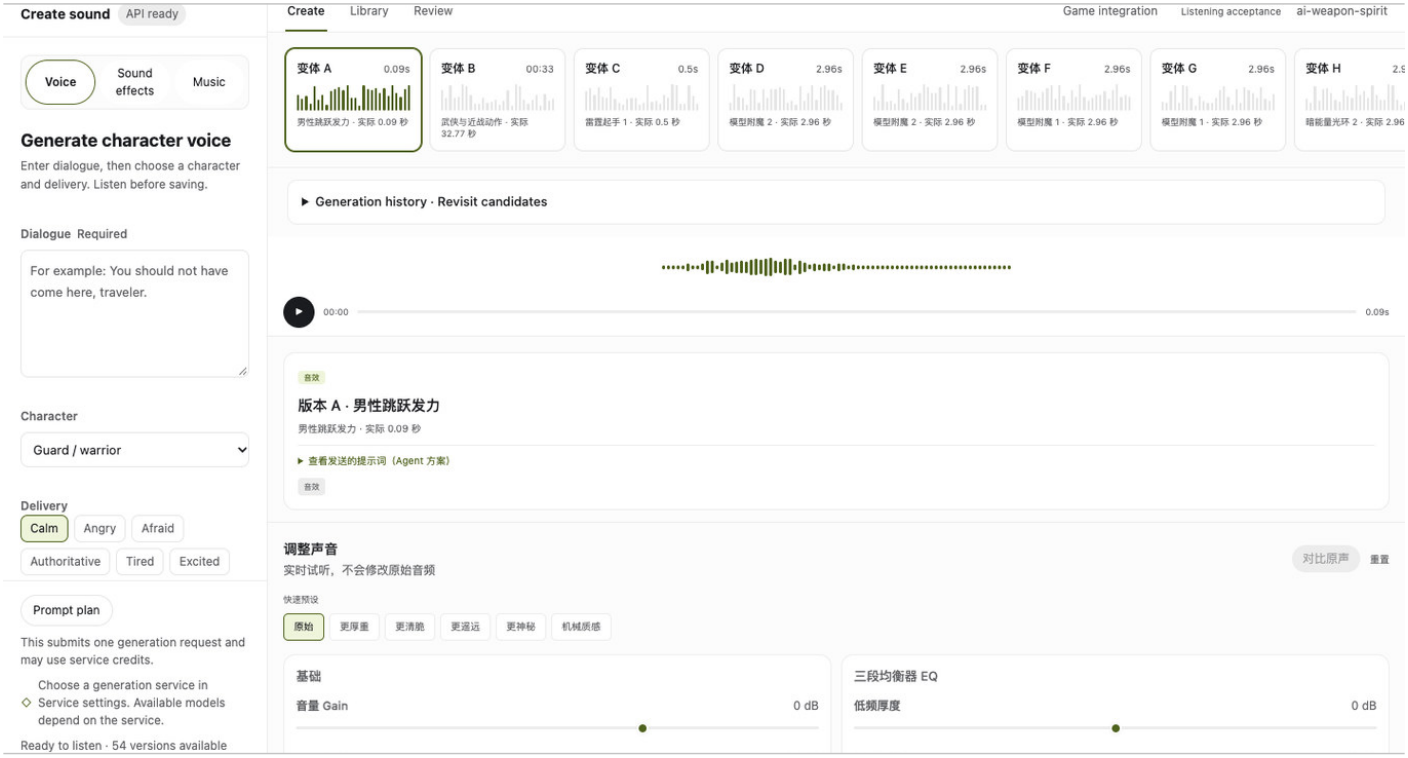

Sound redesign by Hu JinLin. Picture and edit from the official Delta Force season cinematic published on 16 April 2026, credited to the original rights holders.

S1 / SUPPLEMENTARY / TEAM AUDIO PLUGIN

ForgeaX Sound Workshop

A ForgeaX Studio extension for creating, auditioning and revising music, sound effects and voice.

MY ROLE **Audio workflow lead, implementation with collaborators**

Sound Workshop interface for reviewing audio candidates and revisions.

> Explore the workflow **> Official ForgeaX catalogue**

FROM BRIEF TO PLAYBACK

A creator auditions and revises a candidate while retaining its source and settings. The chosen version is then connected to a playback trigger in the game code.

ONE DELIVERY TEST

We followed a 16-second generated music cue through export and import, then checked triggering, looping and stopping in a game template.

01 BRIEF 02 AUDITION 03 REVISE 04 BIND TO EVENT

Audio workflow and product direction by Hu JinLin. Implementation with developer collaborators and AI-assisted coding. Product catalogue by ForgeaX.
